SUMMARY

Master student in the Politehnica University of Bucharest with a bachelor in Computer Engineering with experience building web applications using .NET and Vue.js ,CI/CD pipelines using Docker and Github actions, experience on data cleaning and processing with Python and hands-on experience with machine learning algorithm training, also with Linux kernel programming using C and eBPF

TECHNICAL SKILLS

Languages: C/C++, Python, C#, Java, JavaScript

Backend & Architecture: SpringBoot, .NET, Flask, REST API

AI / ML: PyTorch, XGBoost, RandomForest, Linear regression

Computer Vision: Object detection

Cloud / DevOps: Docker, Github actions, AWS, Github

Data / Databases: MySQL, Oracle

EXPERIENCE

Logiscool – Instructor Formator [Sep 2025 – June 2026]

• Teaching young kids Python programming language and algorithmic thinking from beginner to intermediate to advance

STS – Serviciul de Telecomunicatii Speciale - Intern [July 2025 – July 2025]

• Internship where I deepened my knowledge of networking, machine learning, and Linux operating system management.

Freelancer – Fullstack dev / Sys admin [Sep 2024 – June 2025]

• Freelancing projects where I designed and implemented e-commerce and presentation website using .NET and Nuxt.js

• Designed the database schema and automated the CI/CD pipeline using Github actions along with the deployment on Docker with AWS (backend : Github | frontend : Github | backend : Github | frontend: Github | deployment : Github)

SELECTED PROJECTS

RT-IDS system – ***Machine Learning, AI , Python, C , Kernel programming, BPF programming, Redis , Flask, eBPF***

• A real-time intrusion detection system that detects different anomalies on a linux machine using a trained model to give an accuracy based score that tells if it's anomaly or not for a chain of commands executed on the linux kernel . (Github)

eBPF log collector — *C , Makefile, Bash scripting*

• Built an eBPF-based Linux kernel log collection system programmed in C (Github)

eBPF ML training — *Python, RandomForest, XGBoost, Data Processing*

• Trained an AI model to detect malicious command chains from Linux kernel logs (Github)

Qwirkle image recognition — *Python, Image processing*

• In a game called Qwirkle, calculated the points using image processing and pattern matching on every piece (Github)

ESP-8266 Thermometer – Java, ESP-8266, Hibernate, SpringBoot

• Designed a thermometer using ESP-8266 and Springboot and Thymeleaf for an interface (Github)

Automated Irrigation System – ESP-8266, .NET, C, Embedded

• Developed an automated irrigation system with soil moisture threshold control and automatic water pumping (Github)

C++ project – C++, OOP

• C++ hotel booking system made in C++ console (Github)

EDUCATION

***Bachelor* - Computer Engineering / Computers and Information Technology — University of Bucharest | Oct 2022 – June 2026**

Master - Computer Science / Theory of storage and information encoding — Politehnica University of Bucharest | Sep 2026 – June 2028

ADDITIONAL TRAINING

CCNA 1 / CCNA 2 | 2023 – 2024

Languages: [Romanian (Native) • English (Advanced)]
